DETAILED ACTION

Page 2

Response to Arguments

1. Applicant's arguments filed on 8/11/2004 have been fully considered but they are not persuasive. Shoemaker uses a single four-way valve (20, FIG. 1), working in conjunction with a combination of two-way, three-port selection valves (22 and 24), which operate to enable either of the two compressors (12 and 14). Shoemaker continues to explain how if more compressors are included, more selection valves will be required (col 5, lines 18-19). Since the expander in applicant's case is viewed as another work-producing device, one with ordinary skill in the art would find it obvious to increase the number of valves in order to alternate the refrigerant flow pass between all work producing devices, in order to provide a scheme where minimum work is inputed in the system.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over "Transcritical CO2 Cycle Technology" 2002 SAE Automotive Alternate Refrigerant Systems Symposium, July 2002, pages 1-17 by Joo Seok Baek, et al., in view of U.S. Patent 4,739,628 to Shoemaker. Baek (Figure titled: Two-compressor system (Intercooler cycle), on page 12) discloses applicant's basic inventive concept, a refrigeration cycle employing a CO₂ refrigerant with an expander (ED-WOW) connected to the compressor (1st stage compressor), an outdoor heat exchanger (Gas

Art Unit: 3744

Cooler), an indoor heat exchanger (Evaporator) and an auxiliary compressor (2nd stage compressor) where the expander is used to provide the power to the auxiliary compressor, substantially as claimed with the exception of stating the use of multiple four-way valves in the system. Shoemaker shows this feature to be old in the refrigeration art (20, FIG. 1). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made from the teaching of Shoemaker to modify the system of Baek, by adding a four-way valve in order to reverse the flow of the refrigerant depending on the cooling/heating need between the compressors and make the system a heat pump (col 3, lines 1-23).

Allowable Subject Matter

- 4. Claims 10-20 are allowed.
- 5. Claims 2-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 3744

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Filip Zec whose telephone number is (571) 272-4815. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on (571) 272-4808. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
